

MADE-TO-FIT CABLE HARNESSSES & CABLE ASSEMBLIES

Sealed interconnects for OEM and industrial specifiers — designed, built, tested, and stocked by one team.

FROM PINOUT TO PRODUCTION-READY HARNESS

FormRep builds made-to-fit cable harnesses and cable assemblies to your drawing, sample, or pinout — including Deutsch-style sealed connectors, overmolded strain relief, armored conduit, M12 / circular industrial connectors, and PCB-integrated modules. Prototype through any volume, with first-article support and inventory programs when you are ready to run.

Overmold + M12

Sealed multipin

Armored conduit

Embedded module

Complex harness assemblies

WHAT WE BUILD

Sealed Deutsch-style

DT, DTM, HD10 and related sealed families with wedges, seals, and locking. Built for wet, dirty, and high-vibration equipment.

Overmolding & strain relief

Made-to-fit overmolded boots and transitions that protect the connector-to-cable joint and give the assembly a finished, production appearance.

Armored / metal conduit

Flexible metallic conduit assemblies for crush, abrasion, and shop-floor abuse — including mixed connector ends.

M12 & circular industrial

Threaded circular and M12-style interconnects for sensors, controls, and machine I/O. Straight or right-angle exits.

PCB + cable integration

Boards, potted modules, and discrete electronics built into the harness so the customer receives one tested assembly.

Design, DFM & first article

Pinouts, drawings, connector selection, and first-article builds from a napkin spec or a competing sample.

PRODUCTION DISCIPLINE

100% electrical test

Continuity and hipot testing as specified on the print. First-article inspection before the production lot ships.

KEEP THE LINE RUNNING

Kanban, kitting & inventory

Finished harnesses stocked and released to your schedule — the same inventory model we already run for molded and printed parts.
